SLSWITCH

On-demand lighting
Festive lighting

Citylone has launched new ranges of lighting controllers that are cost-effective, subscription-free, without management and easy to install.

The SL-Switch is a **radio module** for controlling outdoor and **festive lighting**.

## Key Strengths
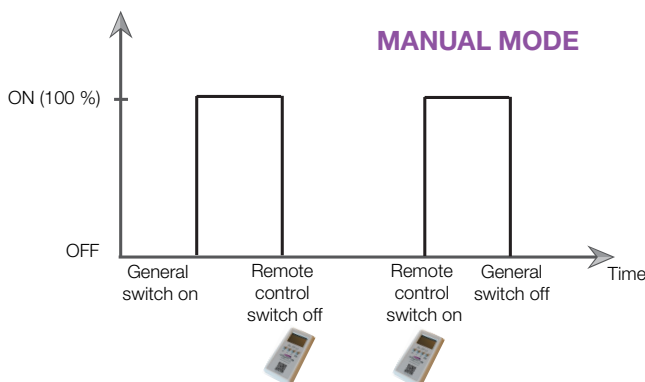

- Operated by a two-way remote control
- Simple and precise control of light displays
- No batteries or internal clock

The SLswitch ON/OFF controller communicates via **radio,** providing **precise control of the lights:** activate scheduling, set lighting times, control the number of days of lighting...

Its remote control **sends and receives information from the module;** this allows you to program it and monitor its status.

The SLswitch is installed on a **plastic DIN rail box on the outside of the pole and works without a battery or clock;** there are therefore no maintenance costs or deviation in time.

AUTO MODE

ON (100 %)

PROGRAMMABLE SWITCH-ON TIME

OFF

General switch on   Switch-off light display   General Switch-off   Time

MANUAL MODE

ON (100 %)

OFF

General switch on   Remote control switch off   Remote control switch on   General switch off   Time

APPLICATIONS

- Control of festive lights activation
- Event locations to switch off certain lights point upon request
- Outdoor sporting facilities to partially switch off certain projectors...

FEATURES

Program a controller that transmits to others via repetition (by radio)

Override ON/OFF mode with remote control

Schedule light displays and only activate on launch day via remote control

Set the lighting time from switch-on and the number of days of lighting

Option to cancel the programmed mode before the end of the pre-set time using the remote control

View the system parameters using the two-way remote-control transmission

SPECIFICATIONS

ON/OFF radio controller

868 Mhz two-way radio communication

Signal repetition between controllers for programming

Controllers must be installed in an IP44 plastic case on the outside of the pole

Operates on a network powered at night only (not compatible with a 24/7 network)

BENEFITS

Reduces the work required to switch on festive lighting

Offers different programmes without modifying the electricity networks

On-demand switching control for festivals, concerts, sport events...

PRODUCT RANGE

For more technical information, please refer to the technical and installation guide.

REFERENCES	DESCRIPTION
SLSWITCH	**Stand-alone controller to operate switching for all types of ballasts* and lighting** An ON/OFF switch for 300W - 2A maximum power output (if more, a suitable contactor is required). No power line carrier communication *in compliance with the technical specifications of the ballast and the source
SL-TP-SW	**Two-way configuration remote controller Switch** To set the SL-Switch parameters and/or real-time on/off control The SL-TP-U remote control is not compatible with SLswitch solutions.
